11.	Resistive touch panel calibration	10

1. TF card test

EVK supports hot-plugging .Insert the TF card, the terminal will see the prompt information.

```
# [ 1955.657016] mmc0: host does not support reading read-only switch, assuming write-enable
[ 1955.672888] mmc0: new high speed SDHC card at address 1234
[ 1955.680589] mmcblk0: mmc0:1234 SA16G 14.6 GiB
[ 1955.710582] mmcblk0: p1
[ 1955.766859] FAT-fs (mmcblk0p1): Volume was not properly unmounted. Some data may be corrupt. Please run fsck.
```

█

Mount TF card:

```
#mount /dev/mmcblk0p1 /mnt
```

View TF card content:

```
#ls /mnt
```

```
# mount /dev/mmcblk0p1 /mnt
# ls -l /mnt
total 352

# █
```

Write "12345" into tftest.txt file:

```
#echo 12345 > /mnt/tftest.txt
```

```
#sync
```

View tftest.txt file:

```
#cat /mnt/tftest.txt
```

```
# cat /mnt/tftest.txt
12345
# █
```

Write successfully.

2. UART Test

EVK supports two RS232 and one RS485.

The device name of UART1 in the system is /dev/ttymx0, and UART2 is /dev/ttymx1. UART1 is for debug. Here we take UART2 as an example.

EVK supports UART test application `uart_test`, method as follows:

Step 1: short TXD and RXD of UART2 (J9) by jumper:

Step 2:

```
#cat /dev/ttymx1 &
#echo 11111 > /dev/ttymx1
```

3. Ethernet test

EVK supports one 10/100M adaptive Eth, insert the network cable, shell terminal prompt information as follow. :

```
# [20618.138525] fec 2188000.ethernet eth0: Link is Up - 100Mbps/Full - flow control rx/tx
```

3.1 Check the Ethernet info:

```
#ifconfig eth0 up
#ifconfig

# ifconfig
eth0      Link encap:Ethernet  HWaddr 12:D9:BD:7F:DF:58
          inet addr:192.168.0.138  Bcast:192.168.0.255  Mask:255.255.255.0
          inet6 addr: fe80::90c2:bd0b:f32a:2a25/64 Scope:Link
          UP BROADCAST RUNNING MULTICAST  MTU:1500  Metric:1
          RX packets:5722 errors:0 dropped:0 overruns:0 frame:0
          TX packets:104 errors:0 dropped:0 overruns:0 carrier:0
          collisions:0 txqueuelen:1000
          RX bytes:541395 (528.7 KiB)  TX bytes:9613 (9.3 KiB)

lo        Link encap:Local Loopback
          inet addr:127.0.0.1  Mask:255.0.0.0
          inet6 addr: ::1/128 Scope:Host
          UP LOOPBACK RUNNING  MTU:65536  Metric:1
          RX packets:12 errors:0 dropped:0 overruns:0 frame:0
          TX packets:12 errors:0 dropped:0 overruns:0 carrier:0
          collisions:0 txqueuelen:0
          RX bytes:1344 (1.3 KiB)  TX bytes:1344 (1.3 KiB)
```

3.2 Startup and shutdown ethernet :

Shutdown:

```
#ifconfig eth0 down
```

Startup:

```
#ifconfig eth0 up
```

3.3 Set IP Address

```
#ifconfig eth0 192.168.0.137
#ifconfig
```

```
# ifconfig eth0 192.168.0.137
# ifconfig
eth0      Link encap:Ethernet  HWaddr 12:D9:BD:7F:DF:58
          inet addr:192.168.0.137  Bcast:192.168.0.255  Mask:255.255.255.0
          inet6 addr: fe80::90c2:bd0b:f32a:2a25/64 Scope:Link
          UP BROADCAST RUNNING MULTICAST  MTU:1500  Metric:1
          RX packets:10591 errors:0 dropped:0 overruns:0 frame:0
          TX packets:125 errors:0 dropped:0 overruns:0 carrier:0
          collisions:0 txqueuelen:1000
          RX bytes:1042611 (1018.1 KiB)  TX bytes:10381 (10.1 KiB)
```

3.4 Set MAC address

```
#ifconfig eth0 down
#ifconfig eth0 hw ether 1A:1A:2B:4F:EF:D9
#ifconfig eth0 up
```

```
# ifconfig eth0 hw ether 1A:1A:2B:4F:EF:D9
# ifconfig
eth0      Link encap:Ethernet  HWaddr 1A:1A:2B:4F:EF:D9
          inet addr:192.168.0.137  Bcast:192.168.0.255  Mask:255.255.255.0
          inet6 addr: fe80::90c2:bd0b:f32a:2a25/64 Scope:Link
          UP BROADCAST RUNNING MULTICAST  MTU:1500  Metric:1
          RX packets:11678 errors:0 dropped:0 overruns:0 frame:0
          TX packets:152 errors:0 dropped:0 overruns:0 carrier:0
```

3.5 Set netmask

```
#ifconfig eth0 netmask 255.255.255.0
```

3.6 Add/remove gateway

Add gateway:

```
#route add default gw 192.168.0.1
#route (查看当前路由)
```

```
# route
Kernel IP routing table
Destination    Gateway         Genmask         Flags Metric Ref    Use Iface
default        192.168.0.1    0.0.0.0         UG    0      0        0 eth0
192.168.0.0    *              255.255.255.0   U      0      0        0 eth0
# █
```

Remove gateway:

```
#route del gateway 192.168.0.1
```

3.7 Set DNS

Add your DNS address to the /etc/resolv.conf

```
#vi /etc/resolv.conf
```

```
nameserver 8.8.8.8
nameserver 122.122.122.122
```

3.8 Configure DHCP

The system uses DHCP mode by default, if you want to modify, please stop the /etc/init.d/S41dhcpcd first, you can:

```
#mv /etc/init.d/S41dhcpcd /etc/init.d/X41dhcpcd
```

Modify the /etc/network/interfaces file like this:

```
#vi /etc/network/interfaces

auto lo
iface lo inet loopback

auto eth0
#iface eth0 inet static #static mode
#address 192.168.3.128
#netmask 255.255.255.0

iface eth0 inet dhcp #dhcp mode
```

4. USB

Use 16G Kingston usb , larger storage is not test yet。Hot-pluggin supported.Insert the USB,shell terminal prints as follow, different brand models may have different info.

```
# [ 885.337634] usb 1-1.1: new high-speed USB device number 4 using ci_hsrc
[ 885.457591] usb 1-1.1: New USB device found, idVendor=0951, idProduct=1666
[ 885.464653] usb 1-1.1: New USB device strings: Mfr=1, Product=2, SerialNumber=3
[ 885.473025] usb 1-1.1: Product: DataTraveler 3.0
[ 885.477864] usb 1-1.1: Manufacturer: Kingston
[ 885.482326] usb 1-1.1: SerialNumber: 60A44C3FAC7DF2A069726FB4
[ 885.491533] usb 1-1.1: new config #1 exceeds power limit by 200mA
[ 885.510896] usb-storage 1-1.1:1.0: USB Mass Storage device detected
[ 885.538786] scsi host0: usb-storage 1-1.1:1.0
[ 885.551776] usb 1-1-port1: 300mA is over 100mA budget!
[ 885.557000] usb 1-1-port2: 500mA is over 100mA budget!
[ 885.593627] hub 1-1:1.0: 400mA over power budget!
[ 886.549758] scsi 0:0:0:0: Direct-Access Kingston DataTraveler 3.0 PQ: 0 ANSI: 6
```

4.1 Mount usb

```
#mount /dev/sda1 /mnt
```

4.2 View usb content

```
#ls /mnt
# ls /mnt
System Volume Information test
safety.mp3
```

4.3 Write some string to file.

```
#echo 12345 > /mnt/test_usb.txt
#sync
#cat /mnt/test_usb.txt

# echo 12345 > /mnt/test_usb.txt
# sync
# cat /mnt/test_usb.txt
12345
#
```

5. Wifi

RTL8723bu WIFI-ble module default.

Step 1: Confirm RTL8723bu is OK on the EVK, and connect the antenna.

Step 2: EVK power on, check wifi device :

```
#ifconfig wlan0

# ifconfig wlan0
wlan0      Link encap:Ethernet  HWaddr 18:BB:26:F5:CE:84
           UP BROADCAST MULTICAST  MTU:1500  Metric:1
           RX packets:0 errors:0 dropped:0 overruns:0 frame:0
           TX packets:0 errors:0 dropped:0 overruns:0 carrier:0
           collisions:0 txqueuelen:1000
           RX bytes:0 (0.0 B)  TX bytes:0 (0.0 B)
```

Step 3: Startup WiFi

```
#ifconfig wlan0 up
```

Step 4: Scan wireless devices:

```
#iwlist wlan0 scan
Cell 01 - Address: 9E:D9:B3:A6:B8:7A
           ESSID:"wifi-net-ssid"
           Protocol:IEEE 802.11bgn
           Mode:Master
           Frequency:2.442 GHz (Channel 7)
           Encryption key:on
           Bit Rates:300 Mb/s
           Quality=36/100  Signal level=62/100
```

➤ Router Encryption Using WPA-PSK

Use wpa_supplicant other than iwconfig wlan0 key xxx, iwconfig key is suitable for WEP/WPA.

Step 5: Config wpa_supplicant file:

Create file: vi /etc/wpa_supplicant.conf

```
ctrl_interface=/var/run/wpa_supplicant
ap_scan=1
```

```
network={
    ssid="industio"
    psk="12345678"
}
```

Step 6: Connect wlan0 to router, run as daemon mode.

```
#wpa_supplicant -D nl80211 -i wlan0 -c /etc/wpa_supplicant.conf -B &
```

```
# wpa_supplicant -D nl80211 -i wlan0 -c /etc/wpa_supplicant.conf -B &
[1] - Done(255) wpa_supplicant -D nl80211 -i wlan0 -c /etc/wpa.conf -B
# Successfully initialized wpa_supplicant

```

Step 7: Set wifi IP address

```
#ifconfig wlan0 192.168.0.169
```

Step 8: Set gateway

```
#route add default gw 192.168.0.1 dev wlan0
```

Step 9: ping router gateway, such as 192.168.0.1

```
#ping 192.168.10.1
```

```
# ping 192.168.0.1
PING 192.168.0.1 (192.168.0.1): 56 data bytes
64 bytes from 192.168.0.1: seq=0 ttl=64 time=36.516 ms
64 bytes from 192.168.0.1: seq=1 ttl=64 time=5.890 ms
64 bytes from 192.168.0.1: seq=2 ttl=64 time=20.592 ms
--
```

wlan0 is ok.

➤ Router Encryption Using WPA/WEP

Step 5: set ssid

```
#iwconfig wlan0 essid "industio"
```

Step 6: config router password

```
#iwconfig wlan0 key "12345678"
```

Step 7: add gateway

```
#route add default gw 192.168.10.1 dev wlan0
```

6. Audio and headphone

Step 1: set volume

Set play volume

```
#amixer cset numid=11,iface=MIXER,name='Headphone Playback Volume' 127,127
```

```
#amixer cset numid=47,iface=MIXER,name='Left Output Mixer PCM Playback Switch' 1
```

```
#amixer cset numid=44,iface=MIXER,name='Right Output Mixer PCM Playback Switch' 1
```

```
#amixer cset numid=10,iface=MIXER,name='Playback Volume' 210
#amixer cset numid=13,iface=MIXER,name='Speaker Playback Volume' 127,127
```

Step 2: play audio file

Put an audio file to EVK system, for example:/opt, insert speaker.

```
#mplayer -ao alsa /opt/safety.mp3
# mplayer -ao alsa /opt/safety.mp3
MPlayer 1.3.0-4.9.4 (C) 2000-2016 MPlayer Team

Playing /opt/safety.mp3.
libavformat version 57.25.100 (internal)
Audio only file format detected.
Clip info:
Title:
Artist:
Album:
Year:
Comment:
Genre: Blues
Load subtitles in /opt/
=====
Opening audio decoder: [ffmpeg] FFmpeg/libavcodec audio decoders
libavcodec version 57.24.102 (internal)
AUDIO: 16000 Hz, 1 ch, floatle, 128.0 kbit/25.00% (ratio: 16000->64000)
Selected audio codec: [ffmp3float] afm: ffmpeg (FFmpeg MPEG layer-3 audio)
=====
AO: [alsa] 16000Hz 1ch floatle (4 bytes per sample)
Video: no video
Starting playback...
A: 3.2 (03.1) of 3.0 (03.0) 2.4% $<50>

Exiting... (End of file)
```

Step 3: Recording test

Amixer config:

```
#amixer cset numid=26,iface=MIXER,name='ALC Function' 3
#amixer cset numid=51,iface=MIXER,name='Left Input Mixer Boost Switch' 1
#amixer cset numid=36,iface=MIXER,name='ADC PCM Capture Volume' 230
#amixer cset numid=1,iface=MIXER,name='Capture Volume' 60
```

Insert CTIA headphone (with mic):

```
#arecord -D hw:0 -f S16_LE temp.wav -d 5
# arecord -D hw:0 -f S16_LE temp.wav -d 5
Recording WAVE 'temp.wav' : Signed 16 bit Little Endian, Rate 8000 Hz, Mono
```

Step 4: play record file

```
#aplay temp.wav
# aplay temp.wav
Playing WAVE 'temp.wav' : Signed 16 bit Little Endian, Rate 8000 Hz, Mono
# █
```

7. CPU temperature

Check CPU temperature:

```
#cat /sys/class/thermal/thermal_zone0/temp
# cat /sys/class/thermal/thermal_zone0/temp
51836
```

Current CPU temperature is 51.836°C.

8. LCD backlight adjustment

Step 1: check the max LCD backlight:

```
#cat /sys/class/backlight/backlight/max_brightness
# cat /sys/class/backlight/backlight/max_brightness
7
```

Step 2: get current LCD backlight:

```
#cat /sys/class/backlight/backlight/brightness
# cat /sys/class/backlight/backlight/brightness
6
#
```

Step 3: set LCD backlight

```
#echo 3 > /sys/class/backlight/backlight/brightness
Recheck:
#cat /sys/class/backlight/backlight/brightness
# cat /sys/class/backlight/backlight/brightness
3
#
```

9. Sqlite3 database test

Sqlite3 is supported on EVK, usage:

```
#sqlite3
# sqlite3
SQLite version 3.21.0 2017-10-24 18:55:49
Enter ".help" for usage hints.
Connected to a transient in-memory database.
Use ".open FILENAME" to reopen on a persistent database.
sqlite>
```

Create database table:

```
#sqlite> create table testtbl1 (one varchar(20),two int);
#sqlite> insert into testtbl1 values('WT-EDKSOM6ULX',255);
#sqlite> insert into testtbl1 values('hello',256);
#sqlite>select * from testtbl1;
```

Do select operation:

```
sqlite> select * from testtbl1;
WT-EDKS0M6ULX|255
hello|256
sqlite> █
```

Quit sqlite3:

```
sqlite>.quite
```

or

```
sqlite>.exit
sqlite> .exit
# █
```

10. Sleep and wakeup test

1) Enter deep sleep mode:

```
#echo enabled > /sys/class/tty/ttymx0/power/wakeup
#echo mem > /sys/power/state

# echo enabled > /sys/class/tty/ttymx0/power/wakeup
# echo mem > /sys/power/state
[ 6398.172208] PM: Syncing filesystems ... done.
[ 6398.202188] Freezing user space processes ... (elapsed 0.001 seconds) done.
[ 6398.203351] Freezing remaining freezable tasks ... (elapsed 0.001 seconds) done.
[ 6398.203363] Suspending console(s) (use no_console_suspend to debug)
```

Press any key in console, wakeup the system:

```
[ 6398.226606] RTL871X: suspend start
[ 6398.226714] RTL871X: rtw_cmd_thread(wlan0) stop_req:1, break

11. Resistive touch panel calibration

Tslib is already ported on EVK, and ts_calibrate can be used to calibrate the resistive touch panel. Connect LCD(J14 or J31) and resistive touch panel (J15) before calibration.

Export tslib environment variable first:

```
#export TS_LIB_TSDEVICE=/dev/input/event0
#export TS_LIB_CONFFILE=/etc/ts.conf
#export TS_LIB_PLUGINDIR=/usr/lib/ts
#export TS_LIB_CALIBFILE=/etc/pointercal
```

Run ts_calibrate :

```
#ts_calibrate
```

Click the cursor position according to the screen prompt to complete the calibration.

Run sync and reboot.
